

Django

Social Media Project

1. Create a Django project called “Social_Media”
2. Create an app called “Facebook”
3. Create a separate urls.py file for Facebook app and create a templates folder .

Social Media Project

4. Create the following models:

- a. Post (title, content, created_at , user)
- b. Comment (post, content)
- c. Use the built-in **User** model
- d. What commands needed to add these models to the database?
- e. What is needed to view this models in the admin site?
- f. Create a superuser account to login in admin

Social Media Project

5. Create some posts from the admin site
6. `posts_list`: this view should view all posts with a good style.
