Django

Django Principles

1. What we mean by "Django follows MVT design pattern"? Explain with details.

2. In Django app, what is the **view.py** file?

Profile Project

1. Create a Django project called "profile management"

2. Create an app called "profile"

3. Create a separate urls.py file for profile app

4. Create a templates folder for profile app

5. Create a view function called "cv", add python variables with your data(name, age ,...) to this function, and display them in a template called "cv.html", this view should be accessible with path /cv

Profile Project

6. Create a view function called "friend_cv", add python variables with **your friend's** data(name, age ,...) to this function, and display them in a template called "friend_cv.html", this view should be accessible with path /friend_cv

7. Create a view function called "index", and add links to your cv and your friend's cv, display them in a template called "index.html", this view should be accessible with path /index
